### **Intertech is a powerhouse of thought leaders with a track record for results.**

Part of the same team that delivers training to the nation's top software developers, Intertech consultants are always up-to-date mentors and contributors, focused on bringing more to the table than heads-down programming.

#### **Our specialties include:**

- *Application Architecture*
- *Software Development/Programming*
- *Technical Leadership*
- *Software Development Best Practices*
- *Framework Development*
- *Project Management*
- *Deployment*
- *Technical Skill Transfer*

**Contact Intertech for a complete introduction.**

**“If you need a consulting partner, it makes sense to work with the team that delivers world-class software consulting services, represents America’s leading software development training company, and leaves your team stronger than when they began.”**

**Ryan McCabe**  
Intertech Partner

Understanding the power of creativity and partnering with clients, Intertech’s Consulting Division continues to prove that there is more to a consultant than heads-down programming. Working with organizations like the State of Minnesota, 3M, Target, and Medtronic since 1991, Intertech has demonstrated through continuous growth and retention of clientele that its unique formula of information sharing is a powerful and valued tool.

Intertech Consulting Services

**Consultants Who Teach.**

**Software Development/Programming**

Each Intertech team member has extensive experience building out frameworks, components, and enterprise applications.

**Application Architecture**

Using field experience from systems that run some of America’s largest organizations, Intertech’s expert Application Architecture services ensure your multi-tiered distributed system is built using a design that is secure, reliable, and reusable. Combining these services with its Framework Development and Software Development Best Practices services, Intertech delivers a complete solution that results in faster application development, error reduction, and improved developer productivity.

**Software Development Best Practices**

Utilizing best practices, Intertech consultants will examine your software development life cycle (SDLC) and, based on past experience and industry standards, recommend and make improvements that include defining and implementing automated build procedures, selecting a source control system, implementing a tool such as Microsoft Team Edition to guide the overall development process, selecting and defining metrics and performance and tuning systems.

**Project Management**

Utilizing a process built from the Project Management Institute’s process improvement premise by staff who are certified PMPs (project management professionals), Intertech consultants deliver a complete approach to how you build software, utilizing these five major stages of a project: ( continued above )

- **Initiation:** Create a project brief and project charter to define the overall project goals.
- **Planning:** Define a set of documents on the front end that prescribes how the project will be executed: requirements document, functional design specification, work breakdown structure, time estimate, schedule, test plan, communications plan, risk identification and risk mitigation plan
- **Executing:** Improve software through: coding best practices, code reviews, and deployment best practices
- **Controlling:** Ensure all is completed to plan by defining guidelines for: meetings, time and budget management, change request process, status report process, and test processes/QA (alpha, beta, gold)
- **Closeout:** Bring to a solid completion by delivering documentation, deploying the application, and defining and executing a plan for maintenance and support.

**Framework Development**

Capitalizing on similarities between applications while addressing changing business needs, Intertech’s Framework Development services deliver an application foundation. From security to tiers and components for user interface, business logic, and data access, Intertech defines the starting point for your line-of-business application development. The result is faster implementation and improved developer productivity. Intertech’s portfolio includes building a framework for one of the nation’s largest lending cooperatives. Today, applications built on this framework support users throughout the country.

**Deployment**

Intertech consultants will define a repeatable way to ensure maximum uptime of the application as versions are released.

**Technical Skill Transfer — Consultants Who Teach**

Each Intertech consultant is a specialist in transferring their experience, so they leave your development team stronger than when they began. Along with this benefit, Intertech clients are also able to leverage Intertech’s leading training division through vouchers relating specifically to the task at hand, so internal teams can continue to support the application once Intertech has finished.

**Expertise**

- .NET
- Java™/JEE
- Ajax
- SOA
- Open Source
- SQL Server
- BizTalk/SharePoint
- Microsoft Team System

**Summary of Services**

- consulting
- project outsourcing
- mentoring
